JOURNAL OF PHYSICS A
GENERAL PHYSICS
1969—SER. 2, VOL. 2

SUBJECT INDEX

PAGE

Absorption and refractive index variation due to continuous distribution of resonances . 398
Affine field theory, torsionless, of Einstein 509
Air showers, extensive, at large core distances, calculations on arrival-time distribution and energy content of 50
Air showers, extensive, energy-loss spectrum of, recorded by Haverah Park 500 m array . 591
Air showers, extensive, theoretical analysis of 574
Anisotropic dielectric layer, transition radiation from, with particular reference to biological membrane 529
Arrival-time distribution and energy content of extensive air showers at large core distances, calculations of 50

Beat frequency between axial modes of gas laser, variation with cavity Q of 87
Beta–gamma angular correlations using sources of thorium active deposit 220
Binding energy of molecular fluid, dielectric constant formulation in many-body optics . 477
Boltzmann's H function, time derivatives of 12
'Bose' fields in scalar representation, general relativistic theory of Lagrangian functions of . 262
Breakdown of gases in high-frequency electric field with and without steady transverse magnetic field 106

Capture, electron, *see* Electron capture
Causality, asymptotic 436
Chains, hydrocarbon-type, with short-range correlations, random-walk model for . . 442
Chains, random, on three types of lattices, calculations for 633
Cluster and nucleon emission in electron scattering 559
Coherence function and intensity in field due to slit illuminated by line source . . . 677
Conductivity, thermal, *see* Thermal conductivity
Conserving approximations and second-order phase transitions in interacting Fermi systems, stability of 487
Correlation functions and Green functions, zero-frequency anomalies of 503
Cosmic-ray muon component near sea level, periodic solar time variations in 584
Cosmic rays, *see also* Muons, Showers, air
Cosmic rays at variety of zenith angles, observations of multiple muons in 365
Cosmology, *see* Universes
Cosmology, evolutionary, role of zero-point energy in 210
Cross sections, photoelectric, coherent and incoherent, of 280 kev gamma rays in Pb, Pt and Sn (L) 245
Crystallization, probability of (L) 137

Density correlation function, diagrammatic expansion for 1
Diagrammatic expansion for density correlation function 1
Dielectric constant formulation of binding energy of molecular fluid in many-body optics . 477
Dielectric layer, anisotropic, transition radiation from, with particular reference to biological membrane 529
Diffraction, inverse, new approach to problem of 236
Dirac equation in de Sitter space 274

Einstein torsionless affine field theory 509
Electric field, high frequency, with and without steady transverse magnetic field, breakdown of gases in 106
Electrodisintegration, nuclear, with nucleon emission 547
Electromagnetic interaction, possible relationship between strong, weak and gravitational interactions (L) 475
Electromagnetic waves, focused, scattering by infinite cylinders 311

PAGE

Electromagnetic waves, high-frequency, heating of electrons in weakly ionized plasma by . 330
Electron capture, K, to positron emission ratio in decay of ^{22}Na, direct measurements of . 392
Electron scattering, nucleon and cluster emission in 559
Electrons, heating of, in weakly ionized plasma by high-frequency electromagnetic waves . 330
Energy loss, rate of, in muons deep underground 650
Energy-loss spectrum of extensive air showers recorded by Haverah Park 500 m array . 591
Energy, internal, and gravitation (L) 141
Energy, zero-point, role of, in evolutionary cosmology 210
Entropy of confined polymer 145, 151

Fermi systems, interacting, stability of conserving approximations and second-order phase transitions in 487
Field equations in general relativity, note on interesting metric of (L) 138
Field theories, general covariant, equivalence of 207
Field theory with higher derivatives, Hamiltonian structure 304
Field theory, torsionless affine, of Einstein 509
Fields, coherent and chaotic, on quantum statistics of superposition of 702
Fields, gravito-inertial, and theory of neutral particles 257
Fields, non-local gauge, and Zilch 624
Flow of rarefied gases between two parallel plates 685
Fluid, interaction of, with gravitational field (L) 141
Fluid, one-dimensional classical, Yang–Lee distribution of zeros for . . . . corr. 249
Fluid, turbulent, light scattering by particles suspended in 126

Gamma–beta correlations using sources of thorium active deposit 220
Gamma rays, 280 kev, in Pb, Pt and Sn, total cross sections of (L) 245
Gases, rarefied, flow between two parallel plates 685
Gaussian light, *N*-time joint photon-counting distributions for 229
Gaussian light, spectrum of clipped photon-counting fluctuations of (L) 411
Gaussian light, statistics of heterodyne detection of 115
General relativity, *see* Relativity, general
Geodesic rays, twisting, symmetries of type N empty space–times possessing . . . 621
Gravitation, *see also* Spinors
Gravitation and internal energy (L) 141
Gravitation, Yilmaz' theory of and some modifications 521
Gravitational field, cylindrically symmetric, Petrov classification of 28
Gravitational interaction, possible relationship between strong, weak and electromagnetic interactions (L) 475
Gravitational waves from isolated sources 34
Gravito-inertial fields and relativity 22
Gravito-inertial fields and theory of neutral particles 257
Green functions and correlation functions, zero-frequency anomalies of 503

Hadronic component of extensive air showers, Monte Carlo studies on 341
Hamiltonian structure, use in field theory with higher derivatives 304
Haverah Park 500 m array, energy-loss spectrum of extensive air showers recorded by . 591
Helicon waves in cylindrical plasma, vacuum boundary conditions for (L) 717
Helium (2 ^{3}S) atoms in high-pressure pulsed helium–neon laser discharge, density of . 611
Helium–neon laser discharge, high-pressure pulsed, density of He (2 ^{3}S) atoms in . . 611
Heterodyne detection of Gaussian light, statistics of 115
Hydrogen, atomic, relativistic corrections to S_{-2} for 419
Hydrogen molecular ion, application of oscillation theory and computational procedures for matrix Sturm–Liouville eigenvalue problems to 278
Hyperfine structure splitting of ^{63}Cu, measurement of 658

Inertial and gravitational fields and relativity 22
Integro-differential equations for light nuclei 666
Intensity and coherence function in field due to slit illuminated by line source . . . 677
Interactions, separable non-local, scattering by 293

PAGE
Interactions, strong, electromagnetic, weak and gravitational, possible relationship between (L) 475
Ionization energy loss of muons in plastic scintillator . . . . . corr. 143
Isobaric-spin potential in heavy deformed nuclei 463

K electron capture to positron emission ratio in decay of ^{22}Na, direct measurement of . 392
Kinetic theory, plasma, new proof of superposition of dressed particles in . . . 605

Lagrangian functions of 'Bose' fields in scalar representation, general relativistic theory of . 262
λ-transitions, simple alternative derivation of Pippard's thermodynamic relations for . . 226
Laser discharge, high-pressure pulsed helium–neon, density of He (2 ^{3}S) atoms in . . 611
Laser, gas, mode self-locking in 95
Laser, gas, variation with cavity Q of beat frequency between axial modes of . . . 87
Laser, single-mode, comparison of semi-classical and quantum theories for . . . 433
Lasers, single-mode gas, intensity of, as function of cavity Q 102
Lattices, calculations for random chains on three types of 633
Light, Gaussian, N-time joint photon-counting distributions for 229
Light, Gaussian, statistics of heterodyne detection of 115
Light nuclei, integro-differential equations for 666
Light scattering by particles suspended in turbulent fluid 126

Magnetic field, breakdown of gases in high-frequency electric field with and without steady transverse 106
Magnetic moments and magnetic dipole transitions in deformed nuclei 456
Many-body optics, dielectric constant formulation of binding energy of molecular fluid in . 477
Matrix Sturm–Liouville eigenvalue problems, oscillation theory and computational procedures for, with application to hydrogen molecular ion 278
Membrane, biological, transition radiation from anisotropic dielectric layer with particular reference to 529
Metric, exact static exterior and interior, of thick plane plate 251
Microwave scattering by turbulent plasma 75
Molecular fluid, binding energy of, dielectric constant formulation in many-body optics . 477
Moments of inertia of nuclei, evaluation of (L) 471
Monte Carlo studies on hadronic component of extensive air showers 341
Muon component in central region of extensive air showers, lateral distribution of . . 334
Muon component of extensive air showers at large zenith angles, theoretical analysis of . 354
Muon component, cosmic-ray, near sea level, periodic solar time variations in . . 584
Muon showers deep underground 374
Muon showers deep underground, from extensive air showers, theoretical analysis of . . 574
Muons deep underground, rate of energy loss 650
Muons deep underground, study of angular distribution and vertical intensity of . . 639
Muons, ionization energy loss of, in plastic scintillator . . . . . corr. 143
Muons, multiple, in cosmic rays at variety of zenith angles, observations of . . . 365

Nuclear electrodisintegration with nucleon emission 547
Nuclear magnetic moments of ^{108}Ag (2·3 min) and Ag^{110} (24s) 658
Nuclear matter, exchange diagrams in theory of (L) 246
Nuclear spin of ^{200}Tl, measurements of 658
Nuclei, deformed, magnetic moments and magnetic dipole transitions in 456
Nuclei, evaluation of moments of inertia of (L) 471
Nuclei, heavy deformed, isobaric-spin potential in 463
Nuclei, isobaric analogue states in 672
Nuclei, non-axial, theory of rotation of 448
Nucleon and cluster emission in electron scattering 559
Nucleon emission from nuclear electrodisintegration 547
Nuclides, mirror, Coulomb-energy radii from isobaric mass parabolas 59

Optics, many-body, dielectric constant formulation of binding energy of molecular fluid in . 477
Oscillation theory and computational procedures for matrix Sturm–Liouville eigenvalue problems, with application to hydrogen molecular ion 278
Oscillators, coupled anharmonic, function space integration for evaluation of statistical sum of 172

PAGE
Particle, neutral, dynamics of, from theory of gravito-inertial fields 257
Particles, charged, investigation of equations of motion in few cosmological solutions . . 427
Particles, dressed, in plasma kinetic theory, new proof of superposition of . . . 605
Perturbation correction, Rayleigh–Schrödinger, to first-order wave functions, variational principles for 193
Perturbation series, self-consistent, for stationary homogeneous turbulence . . . 181
Petrov classification of cylindrically symmetric gravitational field 28
Phase transitions, second-order, and conserving approximations in interacting Fermi systems, stability of 487
Photon-counting distributions, N-time joint, for Gaussian light 229
Photon-counting fluctuations, clipped, of Gaussian light, spectrum of (L) 411
Photons, scattering by plasmas 323
Pippard's thermodynamic relations for λ-transitions, simple alternative derivation of . . 226
Plasma, cylindrical, vacuum boundary conditions for helicon waves in (L) . . . 717
Plasma kinetic theory, new proof of superposition of dressed particles in . . . 605
Plasma, turbulent, microwave scattering by 75
Plasma, weakly ionized, heating of electrons in, by high-frequency electromagnetic waves . 330
Plasmas, scattering of photons by 323
Polarizabilities, dynamic, complementary bounds for 295
Polymer chains, excluded volume in 405
Polymer chains, question of excluded volume in 14
Polymer, confined, entropy of 145, 151
Positron emission to K electron capture ratio in decay of ^{22}Na, direct measurement of . 392
Potential, isobaric-spin, in heavy deformed nuclei 463

Quantum and semi-classical theories for single-mode laser, comparison of . . . 433
Quantum many-body theory, application of diagrammatic expansion in 1
Quantum-mechanical sums, spectral decompositions of certain functionals for evaluation of (L) 413
Quantum mechanics, example of accidental degeneracy arising from virtual symmetry (L) . 720
Quantum statistics of superposition of coherent and chaotic fields, on 702
Quantum systems, stationary, lower bounds to second-order corrections to eigenvalues of observables of (L) 140

Radiation scattered by fluid, statistical properties of (L) 473
Radiation, transition, from anisotropic dielectric layer, with particular reference to biological membrane 529
Random-walk model for hydrocarbon-type chains with short-range correlations . . . 442
Rayleigh–Schrödinger perturbation correction to first-order wave functions, variational principles for 193
Reaction, ^{7}Li (p, n), in impulse approximation, study of 66
Refractive index and absorption variation due to continuous distribution of resonances . 398
Relativistic corrections to S_{-2} for atomic hydrogen 419
Relativistic Stark effect, asymptotic behaviour of solutions of two inhomogeneous differential equations occurring in theory of 200
Relativistic systems, position observables in 17
Relativistic theory, general, of Lagrangian functions of 'Bose' fields in scalar representation . 262
Relativity and gravito-inertial fields 22
Relativity, general, *see also* Metric
Relativity, general, double-series (24 and 2s) approximation method in 34
Relativity, general, note on interesting metric of field equations in (L) 138
Resonances, absorption and refractive index variation due to continuous distribution of . 398

Scattering by separable non-local interactions 293
Scattering, electron, nucleon and cluster emission in 559
Scattering, light, by particles suspended in turbulent fluid 126
Scattering, microwave, by turbulent plasma 75
Scattering of photons by plasmas 323
Scintillator, plastic, ionization energy loss in . . . . . corr. 143
Scattering, single, line profile, determination of, from observed spectrum 540
Scattering of focused electromagnetic waves by infinite cylinders 311

PAGE
Shock waves, simple method for calculation of conditions behind (L) 415
Showers, air, extensive, lateral distribution of muon component in central region of . . 334
Showers, air, extensive, Monte Carlo studies on hadronic component of 341
Showers, air, extensive, muon component of, theoretical analysis of 354
Showers, muon, deep underground 374
Single-scattering line profile, determination of, from observed spectrum 540
de Sitter space, Dirac equation in 274
Sodium 22, direct measurement of K electron capture to positron emission ratio in decay of 392
Solar time variations, periodic, in cosmic-ray muon component near sea level . . . 584
Space–times, type N empty, possessing twisting geodesic rays, symmetries of 621
Spectral decompositions of certain functionals for evaluation of quantum-mechanical sums (L) 413
Spectrum of clipped photon-counting fluctuations of Gaussian light (L) 411
Spectrum, energy-loss, of extensive air showers recorded by Haverah Park 500 m array . 591
Spectrum, observed, determination of single-scattering line profile from 540
Spinors, observability of sign change under 2π rotations 267
Stark effect, relativistic, asymptotic behaviour of solutions of two inhomogeneous differential equations occurring in theory of 200
Statistical mechanics far from equilibrium 157
Statistical properties of radiation scattered by fluid (L) 473
Statistical sum of coupled anharmonic oscillators, function space integration for evaluation of 172
Sturm–Liouville eigenvalue problems, oscillation theory and computational procedures for, with application to hydrogen molecular ion 278
Symmetries of type N empty space–times possessing twisting geodesic rays 621
Symmetry, virtual, hemispherical box as example of (L) 720

Thermal conductivity of methyl chloride–hydrogen sulphide gas mixtures 697
Thermodynamic relations, Pippard's, for λ-transitions, simple alternative derivation of . 226
Thorium active deposit, β–γ angular correlations using 220
Trinucleons, new model for 214
Turbulence, stationary homogeneous, self-consistent perturbation series for 181

Universes having closed time-like lines, paths in 427

Wave functions, variational principles for first-order Rayleigh–Schrödinger perturbation correction to 193

Yang–Lee distribution of zeros for classical one-dimensional fluid . . . . . corr. 249
Yilmaz' theory of gravitation and some modifications 521

Zero-frequency anomalies of correlation functions and Green functions 503
Zilch and non-local gauge fields 624

Professor M. J. Seaton, Ph.D., F.R.S.

Professor K. F. Smith, M.A., Ph.D.

G. R. Wilkinson, Ph.D.

Assistant Editor

Mrs. M. A. Wright, B.Sc.

CONTENTS

No. 1 *January* 1969

PAPERS PAGE

A diagrammatic expansion for the density correlation function . . . . . M. R. Bhagavan and P. Lambert 1
On the time derivatives of Boltzmann's *H* function . . S. Simons 12
Question of excluded volume in polymer chains . . . . A. Kyselka 14
Position observables for relativistic systems . . . . . M. Lunn 17
Gravito-inertial fields and relativity . H. G. L. Coster and J. R. Shepanski 22
Petrov classification of the cylindrically symmetric gravitational field . . . . . K. P. Singh and D. N. Singh 28
The double-series approximation method in general relativity: I—Exact solution of the (24) approximation; II—Discussion of 'wave tails' in the (2*s*) approximation . . . . . A. J. Hunter and M. A. Rotenberg 34
Calculations on the arrival-time distribution and energy content of extensive air showers at large core distances . . . . . A. J. Baxter 50
Coulomb-energy radii from isobaric mass parabolas A. M. I. A. W. Durnford 59
A study of the ^{7}Li(p, n) reaction in the impulse approximation J. Mahalanabis 66
Microwave scattering by turbulent plasma . . . . P. E. Stott 75
Variation with cavity *Q* of the beat frequency between axial modes of a gas laser . . . . . L. Allen, D. G. C. Jones and M. D. Sayers 87
Mode self-locking in gas lasers . D. G. C. Jones, M. D. Sayers and L. Allen 95
The intensity of a single-mode gas laser as a function of cavity *Q* . . . . . M. D. Sayers, L. Allen and D. G. C. Jones 102
Breakdown of gases in a high-frequency electric field with and without a steady transverse magnetic field . . S. N. Sen and B. Bhattacherjee 106
Statistics of heterodyne detection of Gaussian light . E. Jakeman and E. R. Pike 115
Light scattering by particles suspended in a turbulent fluid . . . . . M. Bertolotti, B. Crosignani, P. Di Porto and D. Sette 126

BOOK REVIEWS 129

LETTERS TO THE EDITOR
On the probability of crystallization . . . . L. G. Kachurin 137
Note on an interesting metric of the field equations in general relativity K. Bera 138
Lower bounds to second-order corrections to eigenvalues of observables of stationary quantum systems . . . . . C. S. Sharma 140
Internal energy and gravitation . J. O'Hanlon, P. Rastall and K.-K. Tam 141

CORRIGENDA
Ionization energy loss of muons in a plastic scintillator . . . . . I. S. Jones, K. M. Pathak and M. G. Thompson 143

No. 2 *March* 1969

PAPERS
The entropy of a confined polymer: I . . S. F. Edwards and K. F. Freed 145
The entropy of a confined polymer: II . . R. Collins and A. Wragg 151
Statistical mechanics far from equilibrium S. F. Edwards and W. D. McComb 157
Function space integration for the evaluation of the statistical sum of coupled anharmonic oscillators . . . . . G. J. Papadopoulos 172

No. 2 (*cont.*) *March* 1969

PAGE

Self-consistent perturbation series for stationary homogeneous turbulence . . . . . R. PHYTHIAN 181
Variational principles for first-order wave functions . . P. D. ROBINSON 193
On the asymptotic behaviour of the solutions of the two inhomogeneous differential equations occurring in the theory of the relativistic Stark effect . . . . . M. L. BARTLETT 200
Equivalence of general relativistic field theories . . . G. KNAPECZ 207
A note on the role of zero-point energy in evolutionary cosmology . N. KUMAR 210
A new model for trinucleons . . . S. C. JAIN and B. K. SRIVASTAVA 214
β–γ angular correlations using sources of thorium active deposit . . . . . R. D. SCOTT and J. KYLES 220
A simple alternative derivation of Pippard's thermodynamic relations for λ-transitions . . . . . P. G. WRIGHT 226
N-time joint photon counting distributions for Gaussian light . D. DIALETIS 229
A new approach to the inverse diffraction problem . . . É. LALOR 236

BOOK REVIEWS 241

LETTERS TO THE EDITOR
Total cross sections of 280 kev gamma rays in Pb, Pt and Sn . . . . . K. PARTHASARADHI, J. RAMA RAO and P. V. RAMANA RAO 245
Exchange diagrams in the theory of nuclear matter . . . . . P. A. LAWSON and S. SAMPANTHAR 246

CORRIGENDUM
The Yang–Lee distribution of zeros for a classical one-dimensional fluid . . . . . O. PENROSE and J. S. N. ELVEY 249

No. 3 *May* 1969

PAPERS
The exact static exterior and interior metric of a thick plane plate . . . . . J. HORSKÝ and J. NOVOTNÝ 251
Gravito-inertial fields and the theory of a neutral particle . . . . . H. G. L. COSTER and J. R. SHEPANSKI 257
General relativistic theory of Lagrangian functions of 'Bose' fields in scalar representation . . . . . G. KNAPECZ 262
Is the sign change of spinors under 2π rotations observable? . J. S. DOWKER 267
The Dirac equation in de Sitter space . . . . K. C. HANNABUSS 274
Oscillation theory and computational procedures for matrix Sturm–Liouville eigenvalue problems, with an application to the hydrogen molecular ion . . . . . J. McI. CALVERT and W. D. DAVISON 278
Scattering by separable non-local interactions . . B. L. MOISEIWITSCH 293
Complementary bounds for dynamic polarizabilities . . P. D. ROBINSON 295
Field theory with higher derivatives—Hamiltonian structure . . . . . L. M. C. COELHO DE SOUZA and P. R. RODRIGUES 304
Scattering of focused electromagnetic waves by infinite cylinders . A. R. JONES 311
Scattering of photons by plasmas . . . . . J. RAE 323
Heating of electrons in a weakly ionized plasma by high-frequency electromagnetic waves . . . . . R. N. SINGH and R. P. SINGH 330
Lateral distribution of the muon component in the central region of extensive air showers . . . . . B. BOŃCZAK, R. FIRKOWSKI, J. GAWIN, J. HIBNER, R. MAZE, J. WDOWCZYK and A. ZAWADZKI 334
Monte Carlo studies on the hadronic component of extensive air showers . . . . . K. O. THIELHEIM and R. BEIERSDORF 341

No. 3 (*cont.*) *May* 1969

PAGE

A theoretical analysis of extensive air showers: III—Muon showers at large zenith angles J. F. de BEER, B. HOLYOAK, M. J. L. TURNER, J. WDOWCZYK and A. W. WOLFENDALE 354
Observations of multiple muons in cosmic rays at a variety of zenith angles I. W. ROGERS, M. G. THOMPSON, M. J. L. TURNER and A. W. WOLFENDALE 365
Muon showers deep underground L. G. PORTER and R. O. STENERSON 374
Direct measurement of the K electron capture to positron emission ratio in the decay of ^{22}Na M. F. MCCANN and K. M. SMITH 392
Absorption and refractive index variation due to a continuous distribution of resonances NORA E. HILL 398
Excluded volume in polymer chains A. KYSELKA 405

LETTERS TO THE EDITOR
Spectrum of clipped photon-counting fluctuations of Gaussian light E. JAKEMAN and E. R. PIKE 411
Spectral decompositions of certain functionals for the evaluation of quantum-mechanical sums C. S. SHARMA 413
A simple method for calculation of conditions behind shock waves K. C. LAPWORTH 415

No. 4 *July* 1969

PAPERS
Relativistic corrections to S_{-2} for atomic hydrogen M. L. BARTLETT and E. A. POWER 419
Paths in universe having closed time-like lines U. K. DE 427
Comparison of semi-classical and quantum theories for a single-mode laser L. ALLEN 433
Asymptotic causality G. R. SCREATON 436
A random-walk model for hydrocarbon-type chains with short-range correlations V. D. GUPTA, U. KAPUR and C. MEHROTRA 442
On the theory of rotation of non-axial nuclei V. A. KRUTOV and N. V. ZACKREVSKY 448
Magnetic moments and magnetic dipole transitions in deformed nuclei V. A. KRUTOV and N. V. ZACKREVSKY 456
The isobaric-spin potential in heavy deformed nuclei V. A. KRUTOV and L. N. SAVUSHKIN 463

BOOK REVIEWS 466

LETTERS TO THE EDITOR
On the evaluation of the moments of inertia of nuclei J. N. URBANO 471
Statistical properties of radiation scattered by a fluid M. BERTOLOTTI, B. CROSIGNANI, P. DI PORTO and D. SETTE 473
A possible relationship between strong, electromagnetic, weak and gravitational interactions L. M. STEPHENSON 475

No. 5 *September* 1969

PAPERS
Many-body optics: II—Dielectric constant formulation of the binding energy of a molecular fluid R. K. BULLOUGH 477
Stability of conserving approximations and second-order phase transitions in interacting Fermi systems G. MORANDI 487
Correlation functions and Green functions: zero-frequency anomalies G. L. LUCAS and G. HORWITZ 503

No. 5 (*cont.*) *September* 1969

PAGE

The torsionless affine field theory of Einstein . . . C. GILBERT 509
Yilmaz' theory of gravitation and some modifications . . . . . B. O. J. TUPPER and C. PAGE 521
Transition radiation from an anisotropic dielectric layer with particular reference to the biological membrane . . . . . J. LAM 529
The determination of the single-scattering line profile from the observed spectrum . . . . . D. L. MISELL and A. F. JONES 540
Nuclear electrodisintegration with nucleon emission C. STRACHAN and A. WATT 547
Nucleon and cluster emission in electron scattering . . . A. WATT 559
Theoretical analysis of extensive air showers: IV—Muon showers deep underground . . . C. ADCOCK, A. W. WOLFENDALE and J. WDOWCZYK 574
Periodic solar time variations in the cosmic-ray muon component near sea level . . . . . R. M. BRIGGS, R. B. HICKS and S. STANDIL 584
The energy-loss spectrum of extensive air showers recorded by the Haverah Park 500 m array . . J. D. HOLLOWS, H. W. HUNTER and A. N. SURI 591
A new proof of superposition of dressed particles in plasma kinetic theory . . . . . K. C. SO and C. H. LIU 605
The density of He($2\,^3S$) atoms in a high-pressure pulsed helium–neon laser discharge . . R. M. LANGDON, K. G. NICHOLS and G. C. THOMAS 611

No. 6 *November* 1969

PAPERS

Symmetries of type N empty space-times possessing twisting geodesic rays . . . . . C. D. COLLINSON 621
Non-local gauge fields and Zilch . . A. L. BIRCH and J. S. DOWKER 624
Taille moyenne de certaines classes de chaînes aléatoires . . . . . M. L. MEHTA et P. K. SRIVASTAVA 633
A study of muons deep underground: I—Angular distribution and vertical intensity . . . . . C. T. STOCKEL 639
A study of muons deep underground: II—The rate of energy loss . . . . . J. C. BARTON and C. T. STOCKEL 650
Measurements of the nuclear spin of ^{206}Tl, the hyperfine structure splitting of ^{66}Cu and the nuclear magnetic moments of ^{108}Ag (2·3 min) and ^{110}Ag (24 s) . . . . . C. J. CUSSENS, G. K. ROCHESTER and K. F. SMITH 658
Integro-differential equations for light nuclei . . D. A. F. OMOJOLA 666
Isobaric analogue states in nuclei . . . . . MEERA MURTHY 672
Intensity and coherence function in a field due to a slit illuminated by a line source . . . . . N. CHANDRA, H. PRAKASH and VACHASPATI 677
The flow of rarefied gases between two parallel plates . . G. T. ROBERTS 685
Thermal conductivity of methyl chloride–hydrogen sulphide gas mixtures . . . . . B. N. SRIVASTAVA and A. MANNA 697
On the quantum statistics of the superposition of coherent and chaotic fields . . . . . J. PEŘINA and R. HORÁK 702

BOOK REVIEWS 713

LETTERS TO THE EDITOR

Vacuum boundary conditions for helicon waves in a cylindrical plasma . . . . . B. DAVIES 717
The hemispherical box: an example of virtual symmetry . . A. JOSEPH 719
